HD Ultra Camera Range

IndigoVision recently introduced their new HD Ultra Camera Range with superior functionality, performance and innovation. Claiming the title of the most advanced camera release to date, this exciting new HD Ultra Camera Range is available in three stylish forms: HD Minidome, HD Bullet, and HD PTZ Pendant. All built with Smart.core™ technology, CyberVigilant® in camera, and advanced analytics, the cameras offer superior functionality, performance and innovation.

IndigoVision's Smart.core technology includes better audio and low light performance, optimized H.264 compression, Activity Controlled Framerate Plus (ACF+), and ensures lower bandwidth and storage requirements – saving money in the long term.

Cyber security is taken seriously with IndigoVision's unique and innovative cyber security technology CyberVigilant®. With an extra layer of defense through an enhanced firewall, customers receive notifications direct to their control center user interface in the event that a cyber attack takes place.

Advanced analytics such as motion detection, tamper, tripwire, intrusion, scene change and missing or abandoned object are also built-in the camera range, helping to enhance security.

The new HD Ultra Cameras are also compatible with the latest version of IndigoVision's Security Management Solution, Control Center v15.4. This powerful software includes new improvements such as automatic notification of NVR License faults, new Dynamic Profile Switching mode and VPN for Integra®. These fantastic features combined with a commitment to open standards, integration and unique Distributed Network Architecture (DNA) are what makes IndigoVision an industry leader within the security sector.

Visix Facial Recognition Camera

3xLogic's advanced facial recognition camera is a special purpose, low cost dual lens 2MP camera for instant face detection, identification, and notification of persons of interest (POI) as well as people counting.

Along with the facial recognition application and mobile app, the newest cameras allow users to review captured facial images and choose persons of interest to place on a watch list. These POI's can then be securely communicated via standard AES encryption to the Vigil Trends Cloud Portal and responsible parties can be notified locally on site via WiFi using the 3xLogic facial application (iOS or Android) or via the Vigil Server or Client for quick response.

When used in multiple locations the VX-FR-01 becomes a powerful tool in the detection of persons of interest. Vigil Trends will automatically synchronize all sites with new POI's so that they have the latest images and watch lists can be easily managed through any web browser with internet access to add additional details or make adjustments.

Vigil Trends features an easy to use advanced searching feature, which can show events when a specific POI on the watch list was detected across multiple sites. ♣
