SIMS Advanced Software Application

Surveillance/Security Information Systems (SIMS) is an advanced software application designed for tracking, capturing and storing information related to events, incidents and routine tasks involving casino patrons or property.

SIMS provides the ability to record the day-to-day surveillance activities and to maintain a real-time

chronological log of events that occur in the casino (who called, what happened, etc). The system also provides a user-friendly and efficient means of replacing paper-based audit and maintenance records (visitor logs, equipment logs, etc) and creates an easily accessible audit trail.

SIMS gives surveillance and security operators the ability to record a wide variety of information about casino patrons (subjects). The system is based on subject records that can have one or several incidents attached. Image and textual information can quickly and easily be captured, stored and retrieved, to assist in identifying potential risks and liabilities and to ensure the protection of the overall casino.

This software provides management with a tool to identify areas of improvement for individual staff members and/or training programs. A personal history of work habits can be maintained and specific training issues can be identified.

iColor Flex SLX

iColor Flex SLX is a larger-node and higher-intensity version of Color Kinetics' popular iColor Flex SL, a multi-purpose, LED-based strand of light that gener-

ates extraordinary effects and accommodates expansive installations without the constraints of fixture size, shape or space. Applying Color Kinetics' Chromasic™ technology, each strand of iColor Flex SLX comprises 50 individually controllable LED nodes that are significantly brighter and therefore better suited for longer distance viewing in entertainment and architectural applications.

iColor Flex SLX is made with three red, two green, and two blue LEDs with either flat and clear or domed and translucent lens options. Standard configurations of the product are 10.2 cm (4") and 30.5 cm (12") on-center spacing with white and black node and leader. Custom spacing and leader/node color options are available.

M-32 Biometric Door Handle

The M-32 Biometric Door Handle is a secure way to allow up to 100 people access to a room without issuing keys, and revoking privileges at any moment. No more hassles with recovering keys from former employees or wondering if copies were made. An enrolled user simply presses the sensor, their fingerprint is biometrically identified and an electric clutch lets them open the door. A key may also open the M-32, and only the holders of the keys may enroll and delete an individual. The M-32 stores a fingerprint 'template', not the entire fingerprint image. A template is a chart of what is unique about a fingerprint, but it cannot be used to re-create a fingerprint. The privacy of your employees is not compromised. An LCD display and user-friendly menus make it easy to add and delete only the templates you select. The M-32 will operate for months on 4 AA alkaline batteries and is designed to replace conventional left & right hand door handles.

The M-32 Biometric Door Lock is a highly secure yet low cost solution for count rooms, server rooms, wine cellars, cash cages, and offices. An M-32 Biometric Door Lock could be mounted on a guest suite door so VIP guests have an extra measure of security and convenience.

LED Candle Light

LEDtronics announces the release of its Larger LED Candle Light that flickers like a real candle but without the smoke or carcinogens to worry about. LED candles also eliminate the hot wax and fire hazard so there is no burning or open flame to deal with. The new larger LED candles are 4.92 inches high with a 2.24-inch diameter.

LED lamps operate for more than 100,000 hours (10 years). This energy-efficient LED candle operates for nearly 658 hours (27.4 days) on two replaceable AA-cell batteries. (Batteries are not included with LED candle.) Use the LED candle as a reliable portable light source for window displays, décor ambiance mood lighting, restaurant/club candle table light, and for night party candle lights around garden, pools, decks, or patios.

A box of LED candles come with five LED candles and five frosted glass candleholders to give that authentic look and feel of a real candle. Weight of five LED candles with holders and box packaging: 11lb, 4oz [567grams].

Price for a box of LED candles is \$25.00 each. Availability is stock to four weeks for special requirements.

New DS2 System Software

Dedicated Micros Inc. offers the New DS2, with "NetVu Connected" system software to provide extra network compatibility and remote alarm management functionality.

The New DS2 has completely new hardware and software while retaining a similar look and feel of the ever-popular DS2 product line. It incorporates NetVu Connected technology, a powerful media processor that allows the unit to compress data into multiple formats simultaneously, as well as trans-code from one

format and/or data rate to another. This feature allows cameras to be recorded in evidential quality MJPEG format, while being viewed simultaneously in a live or recorded mode over a low bandwidth link using MPEG4.

Other features included in the new system hardware provide MPEG4 soft CODEC support, integrated DVD-R, tamper proof alarms, flash disk system software and expanded RAM.

Important benefits include true variable record rate per camera, multi-site viewing and playback, FTP archiving and the ability to provide field upgrades of software and new features.

The new NetVu ObserVer, included with the New DS2 at no additional charge, is a sophisticated GUI featuring simple drag-and-drop set up, single/multiple display modes, GoTo time and event capabilities, PTZ camera control and an advanced database editor with site plan support.

Spectra Mini

Pelco introduces the world's smallest, full-featured dome.

It is a system that provides the popular functionality of the Spectra III in a miniature, cost-effective package. A small 4.1-inch dome houses a powerful high-resolution color integrated optics package with 10x optical zoom and an 8x digital zoom. Keeping with Spectra tradition, the Spectra Mini utilizes Pelco's famous Proportional Pan and Tilt technology for precise camera control at full zoom. Spectra Mini can continuously track subjects, even as they move directly below the camera's location. The familiar Spectra family on-screen menus allow setup of the Mini's 64 presets, single pattern and window blank features.

The Spectra Mini mounting options are flexible and can be recessed or surface mounted right out of the box with no additional hardware requirements. Standard on-board UTP circuit and 24V power make installing the Spectra Mini simple. Additionally, the Spectra Mini is visually similar to Pelco's ICS090 Camclosure series, which enables users to deploy both systems for an aesthetically seamless application. ♣
